

What's for Dinner: Mammals

ANSWERS

TIGER

Tigers are predators, catching and eating other animals like this deer.

AYE AYE

This primate from Madagascar uses its front teeth to break into tree bark and get to the beetle larvae underneath.

ELEPHANT

Elephants are herbivores, eating plants like this grass.

HYAENA

Hyenas are known as scavengers, feeding on carcasses like this, but are predators too.

COYPU

This South American rodent feeds on tough water plants.

What's for Dinner: Mammals

ANSWERS

FIN WHALE

Instead of teeth, this whale has plates of baleen that filters krill out of the seawater.

DOLPHIN

The many tiny teeth are perfect for catching slippery fish and squid.

BABYRUSA

Those teeth aren't for feeding! They are to compete for access to females. Babyrusas eat most foods, like these berries.

LEOPARD SEAL

As well as feeding on penguins, leopard seals use their molar teeth to filter krill to eat.

ANTEATER

This animal has no teeth, lapping up ants and termites with its long tongue.
